

During the 12th Batterieforum Deutschland, Rebecca Wilhelm and Leonhard Reinschlüssel were awarded with the 3rd and 1st place prizes for their respective posters.

From the 24th to 26th of January 2024, the Kompetenznetzwerk Lithium-Ion Batterien (KLiB) organized the 12th Batterieforum Deutschland at the Ritz-Carlton in Berlin and virtually, in collaboration with the Federal Ministry of Education and Research (BMBF). High-ranking speakers from industry, science and politics critically examined the topic of batteries from different angles. Beyond that, over 100 posters showcased ongoing studies and current results of publicly funded projects during the accompanying poster exhibition, from which the three best posters were awarded prizes.

Rebecca and Leon presented work conducted within the framework of the BMBF funded projects POp and operaXX, which are part of the AQua cluster of competence. Rebecca presented A Comprehensive Study on the Effect of Washing on Nickel-Rich NCMs: Surface Characterization after Li⁺/H⁺-Exchange, while Leon presented the Temperature-dependent interplay of chemical versus electrochemical electrolyte oxidation at Ni-rich cathodes.
