CALL FOR APPLICATIONS: **MINI-JOB**

The Chair of Werner Siemens for Synthetic Biotechnology at the School of NAT, Chemistry department at the Technical University of Munich in Garching has an opening for a Hiwi job position

Coralline Red Algae Culture Maintenance and Medium Exchange

We are looking for one student assistant to support the cultivation of coralline red algae (CRA). The work focuses on regular culture medium exchange and routine maintenance of algae used in research. Remuneration follows the applicable TUM rates for students performing scientific assistance tasks.

Responsibility and Tasks:

- Prepare and replace CRA culture media according to established laboratory protocols.
- Monitor culture condition and record basic cultivation parameters, including pH and temperature.
- Document medium changes and culture observations, including photographs where required.
- Clean and maintain culture vessels and assist with routine cultivation tasks agreed with project members.

Requirements:

We are looking for a responsible student who can consistently support the cultivation routine. Ideally, you should be available to come to the laboratory on 3 days per week, with a total workload of approximately 7.5 hours per week. The exact schedule, starting date and contract duration will be agreed individually. An interest in algae, biology, chemistry or biotechnology is welcome; previous algae cultivation experience is not required. Training will be provided. Reliability, careful handling and accurate record-keeping are essential. Please send a short motivation statement, your CV and your availability by email, using CRA HiWi in the subject line.
